About me

UI/UX & AI Product Designer with 2+ years of experience crafting end-to-end digital products across web and mobile. Built and shipped interfaces for B2B software, SaaS platforms, dashboards, and industrial applications. Proficient in user research, wireframing, prototyping, design systems, and responsive design. Leverages AI-assisted workflows to accelerate delivery across cross-functional teams.

Experience

UI UX Designer

Feb 2025 - Current

TFrenzy Private Limited, West Bengal

Designing UI for industrial-focused applications including factory safety monitoring, machinery asset tracking, and operational dashboards. Building reusable design systems and integrating AI-assisted workflows for rapid prototyping. Collaborating with developers and project teams to deliver production-ready screens.

UI UX Design Associate

June 2024 - Jan 2025

Brillium Tech Solutions Pvt Ltd, Coimbatore

Contributed to end-to-end product design across client projects, from user research and wireframing to high-fidelity interfaces and prototypes. Collaborated with designers, developers, and project managers to deliver consistent product experiences.

Recent Projects

Industrial Safety Monitoring System

Manage work areas, safety requirements, and sector assignments

Designed the complete UI for factory security systems, including camera-based monitoring and alert dashboards. Delivered the project independently within the given timeline while gaining valuable domain knowledge. Managed the full design process from initial wireframes to production-ready screens.

Plannpost

Social media post scheduling and account management made simple.

Owned UI/UX design from concept to production for responsive web and mobile application. Collaborated closely with developers on design specifications and handover to bring the product vision to life. Focused on intuitive user flows and visual consistency across web and mobile platforms.

Asset Manager Mobile App

QR-based industrial machinery tracking and registration system

Designed a mobile app for industries to manage machinery assets via QR codes. Users can scan QR codes on machines to view details, register new machinery, and generate QR codes directly from the app for seamless asset tracking.
